

ABSTRACT OF THE DISCLOSURE

A weatherseal assembly is provided with a body part (14) and a weatherseal (20). The weatherseal (20) comprises a sealing portion (21) and a fastening portion (22). The sealing portion (21) is provided with a pivotable sealing lip (23) and an abutment lip (24) leading said sealing lip (23) such that when the abutment lip (24) comes into contact with the body part (14) the sealing lip (23) is pivotable from a first position (I) into a second position (II) contacting the body part (14). To achieve a wanted pivoting action and a relatively high contact force of the sealing lip (23) the abutment lip (24) comprises a first leg (25) and a second leg (26) extending at an angle (α) to the first leg (25) in the first position (I). The first leg (25) is connected at one end to the sealing lip (23) and at the other end to the second leg (26). The second leg (26) is deformable by the body part (14) such that the first leg (25) moves the sealing lip (23) from the first position (I) into the second position (II).
